

Cold Cutting & Field Machining

Providing Safe & Precise End-Preparation, Counter Boring & Flange Refacing

SOLUTIONS

- Pipe Cutting & Beveling
- Internal Transitions
- Flange Refacement
- Counter Boring

ADVANTAGES

- Cold Work Applications
- On-site Execution
- Schedule Efficient
- Economic

APPLICATIONS

- 4" - 150" OD

Today's oil and gas industry demands safe, secure, complete omission from flames and sparks.

Cold-cutting split frame lathe machines perform beyond these constraints and deliver safe and precise end-preparation.

This machining technology has become the required tool of choice for pipeline operators, contractors, and facility owners due to its increased efficiency, assured safety, and end result.

BlueFin also provides additional field machining solutions for counter boring and flange refacing demands - routine requirements that occur due to low clearance, minimal space, and on-site specifications.
