

Hydrostatic Pressure Testing

Expertise in Delivering Safe & Successful Hydrostatic Pressure Testing Projects

SOLUTIONS

- Pre-commissioning
- Commissioning
- Reinstatements, Reclassifications
- Dew Point Achievement
- Moisture Achievement
- Hydro & Nitrogen Mediums

ADVANTAGES

- Engineering
- Electronic Monitoring
- Custom Chemistry Technology
- Procedural Execution
- Project Closure Reports

APPLICATIONS

- Pipelines, Flowlines
Offshore Risers
- Production Barges
- MOPU's, Drill Ships,
FSPO's
- Processing & Refining
Facilities
- LNG Facilities
- BOP's

Hydrostatic pressure testing remains an industry standard pre-commissioning and commissioning practice that is a heavily regulated requirement for all branches of the oil and gas industry.

BlueFin incorporates the best-controlled pressure equipment, the latest monitoring technology, and a strong bench of personnel talent combined with project history to deliver safe and successful hydrostatic pressure testing projects.

BlueFin also provides pipeline drying services. This solution is typically synonymous with pre-commissioning phases for new construction projects, however, routine maintenance, reclassifications, and system upgrades also demand drying attention.

This pre-commissioning service is a critical-need activity that mandates application history expertise and confidence.
