

Nitrogen Services

Expertise in Delivering Safe & Successful Hydrostatic Pressure Testing Projects

SOLUTIONS

- Pre-commissioning
- Pressure Testing
- Leak Testing
- Purging

ADVANTAGES

- Corrosion Inhibition
- Inertion
- Transportable

APPLICATIONS

- Pipelines, Flowlines, Offshore Risers
- Offshore Umbilicals
- MOPU's
- Processing & Refinng Facilities
- LNG Facilities
- Storage Caverns

Liquid and gas nitrogen are transparent, odorless chemical elements that deliver beneficial applications due to its inert ability to replace air where oxidation is undesirable.

This critical path use extends to commissioning, product evacuation, maintenance shutdown, leak testing, and general pigging operations. BlueFin's pipeline and process division can supply nitrogen through individual bottle rack cylinders or nitrogen generator units.

If your SOW demands replacement of hazardous atmospheres, inert drying capabilities, integrity testing, or product evacuation, partner with our operations group to understand the complete benefits of nitrogen use.
