

# Spark Free Tooling

Enabling Safe, Spark Free Omissions During Surface Prep & Cutting Tasks

## SOLUTIONS

- Cutting
- Grinding
- Surface Preparation
- Weld Removal
- Safety Heating for I&E

## ADVANTAGES

- No Hot Work Permits required
- No Shut-In Time required
- Cutting pendulum attachment provides increased speed and efficiency
- Cutting guide attachment provides automated benefit

Today's economic sensitive work schedules demand technologies that deliver a response without schedule extensions, additional cost factors, or shut down time.

Most importantly, this technical function must transcend all health, safety and environmental standards in order to protect people, resources and the natural environment.

BlueFin specializes in delivering unique cold work technologies that contain specific metallurgic properties which enable safe, spark free omissions during surface preparation and cutting tasks.

Hot work permits and particular schedule constraints are no longer a hindrance.
